

I made a **dedicated landing_page** with links to all the places you can find me. I've seen other people making these. It's a good idea.

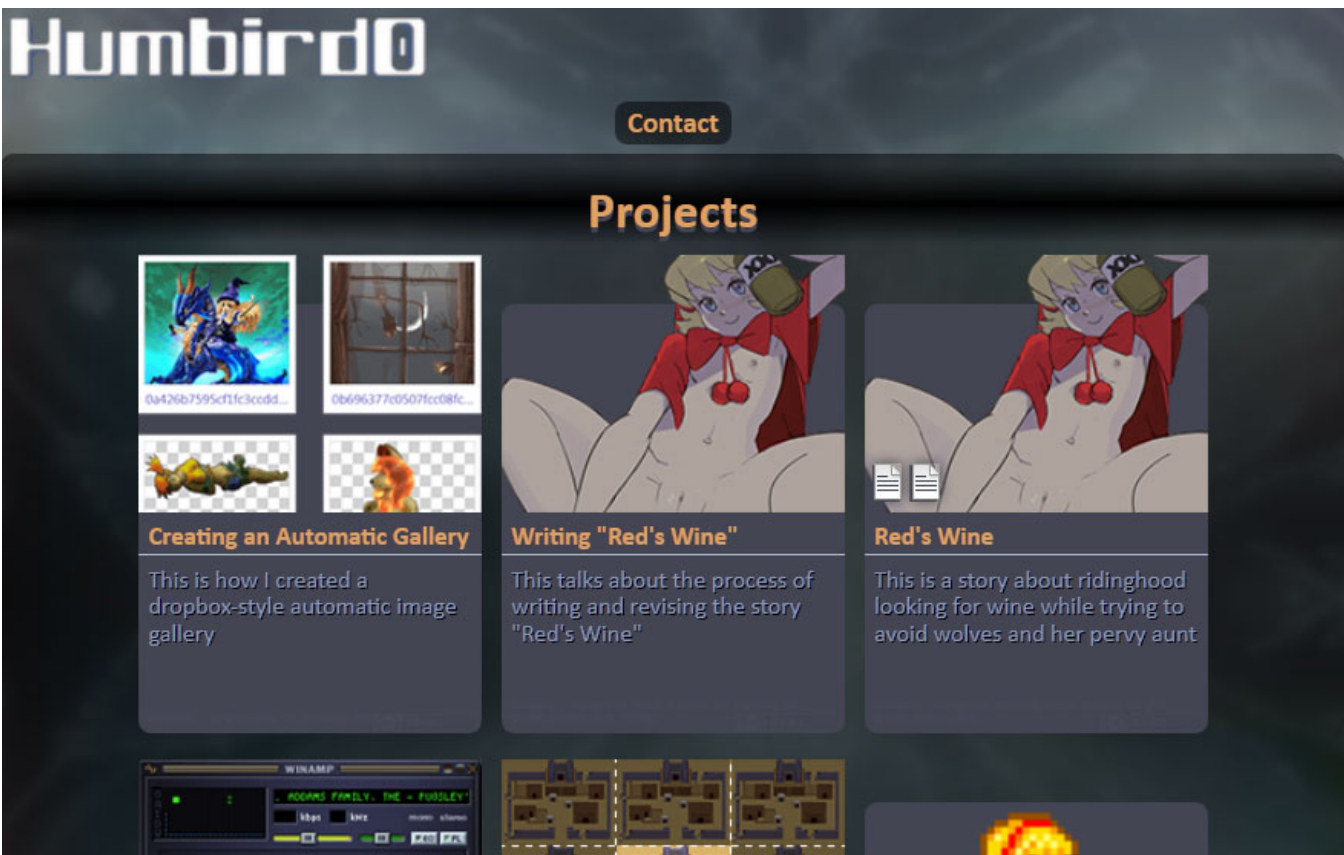

It's a good idea. Just put all your social media links in one place and link to it. It's a shorter link and it's a lot easier than updating a dozen links in a dozen places every time you lose an account for some random reason.

Just wait 'til people discover they can put OTHER things on their landing pages! Like all their art and creations. Almost like... a website.

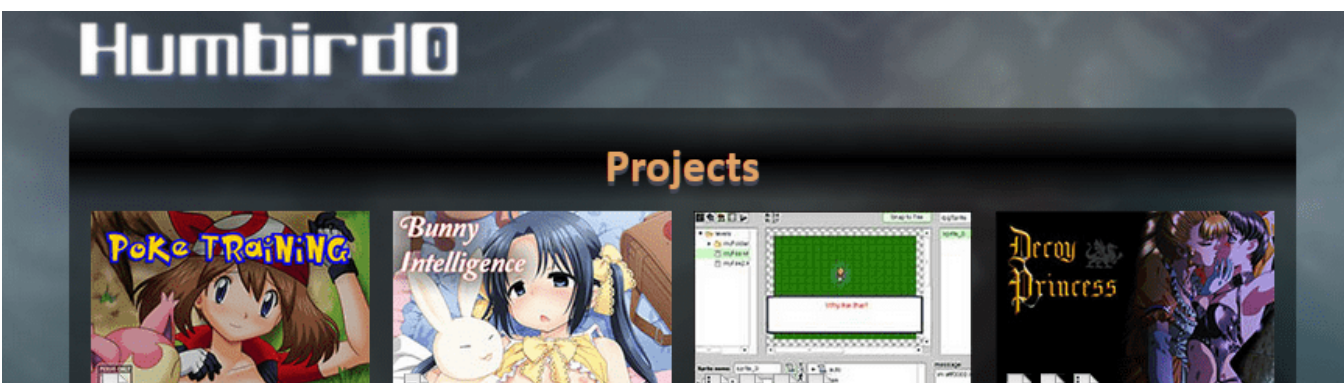

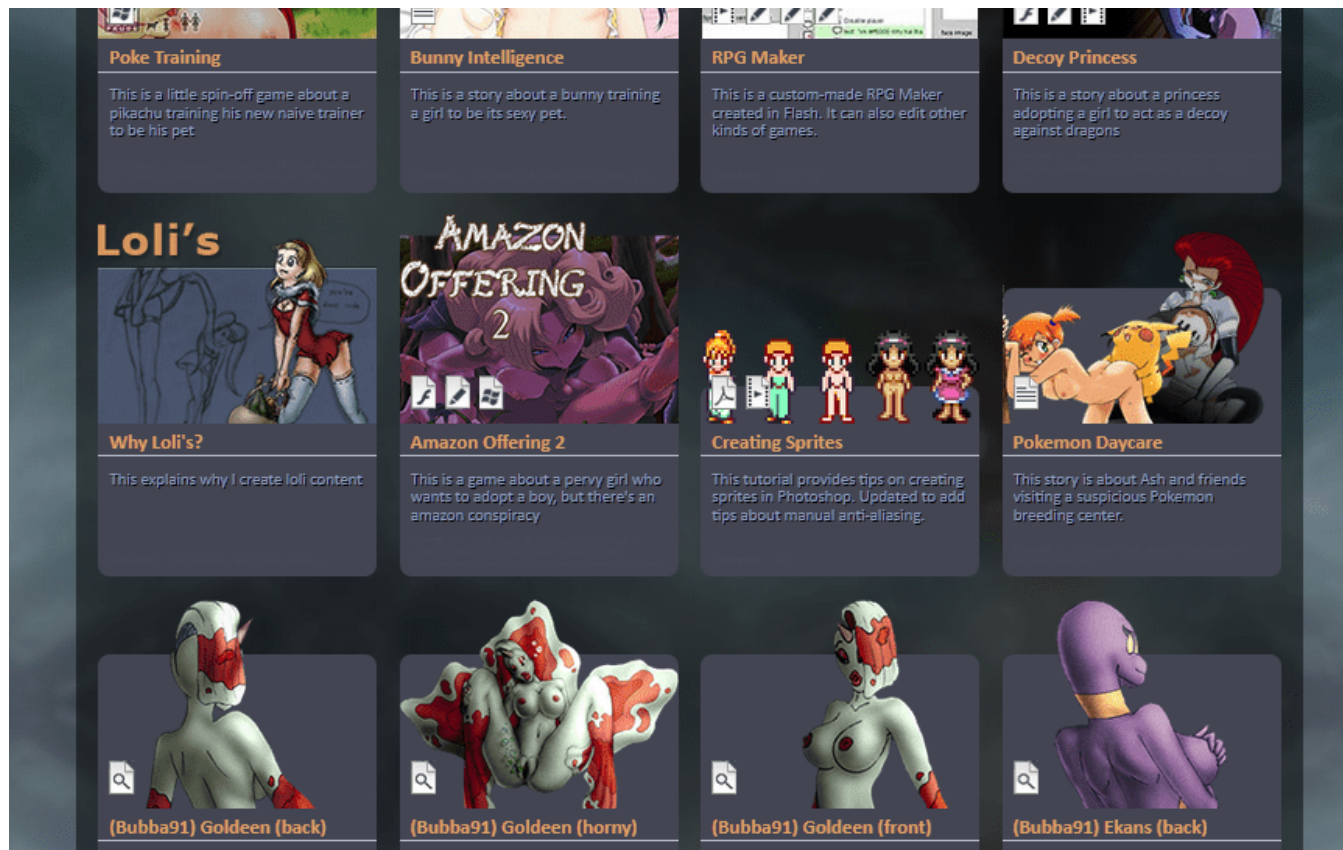

My website already had a “contact” section, but making it a separate page makes it accessible when you have JavaScript turned off. That’s right. My website also works without JavaScript.

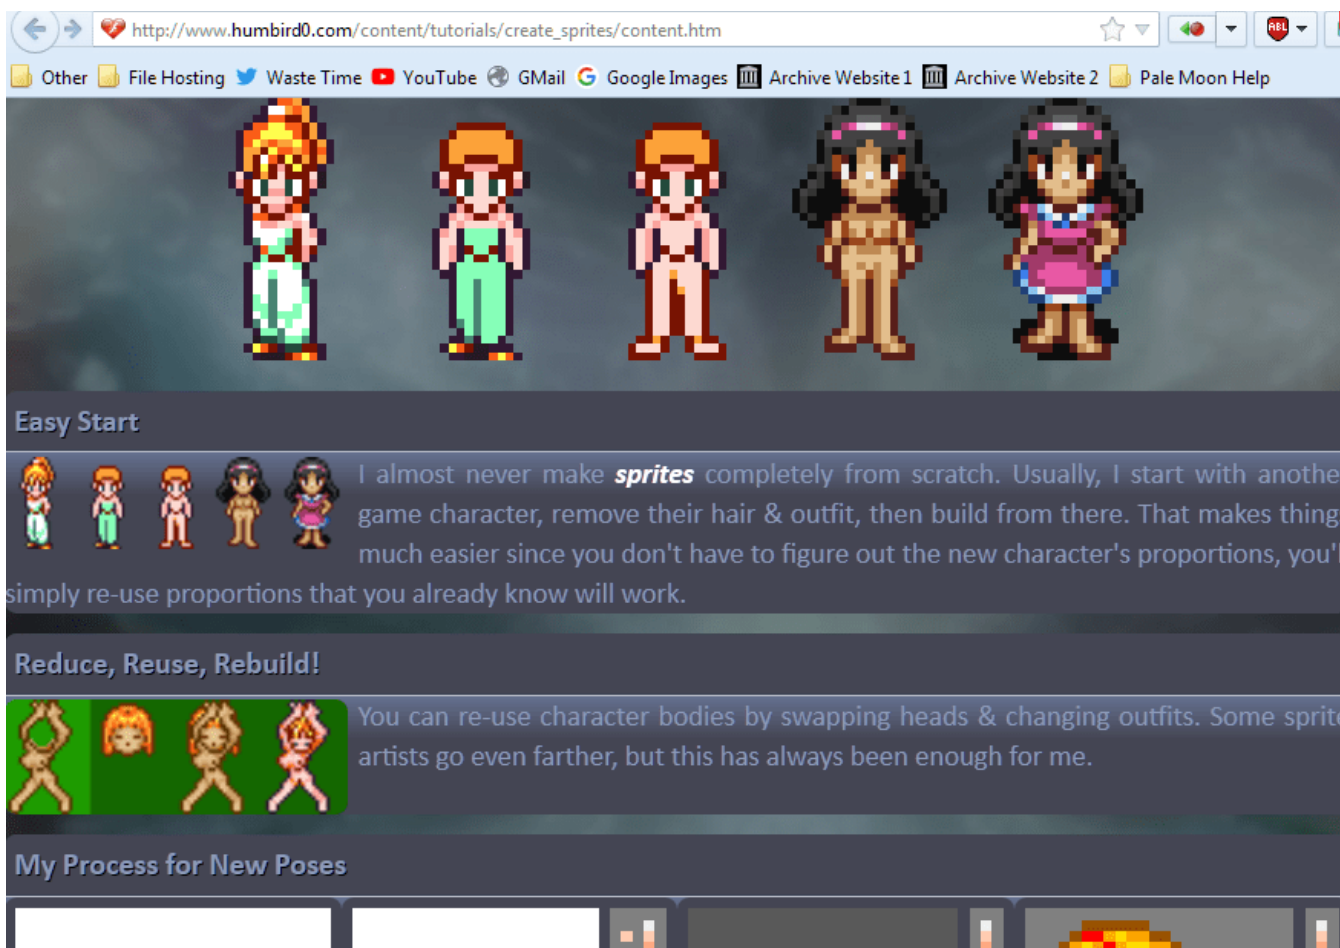

When JavaScript is OFF, the website will display a seemingly normal thumbnail gallery of everything, and you can still download all the files. When JavaScript is ON, the website has all the fancy features and project pages.

I know that seems pointless. JavaScript runs on literally everything. It's almost as common as Flash was... it never hurts to play it safe.

A screenshot of the Commodore 64 BASIC U2 boot screen. The text is displayed in a monospaced font on a dark blue background. The text reads:

```
*** COMMODORE 64 BASIC U2 ***  
64K RAM SYSTEM 38911 BASIC BYTES FREE  
READY.
```

Laugh if you want. But remember when BASIC seemed like the universal compatible language that ran on absolutely everything? Every standard feels like it'll last forever... until it doesn't.

I don't hate JavaScript. I just don't like relying on it.
